High Performance

Tools for information auditing: security, privacy, reliability, effectiveness and efficiency. Collaborative management of data structures and documents. File version control. Status of the objects through visual warnings. Friendly and intuitive GUI.

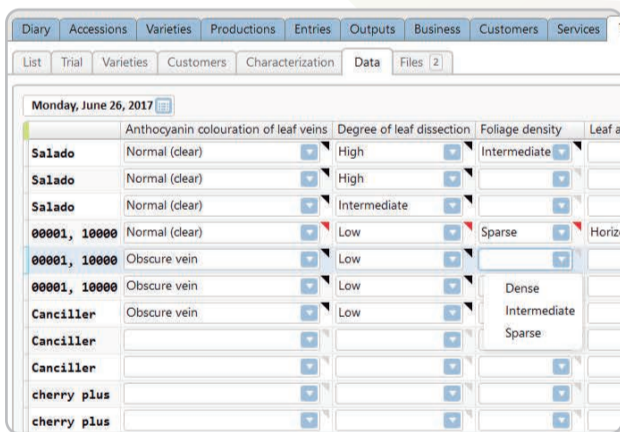

Plant Breeding

Noah provides all the necessary features for the management of plant breeding programs. With a powerful search engine of parentals, predictive tools, configuration of rules for crosses and printing of reports and labels.

Lab Reports

The tool for automatically importing laboratory reports saves time and provides reliability. The process is fully configurable.

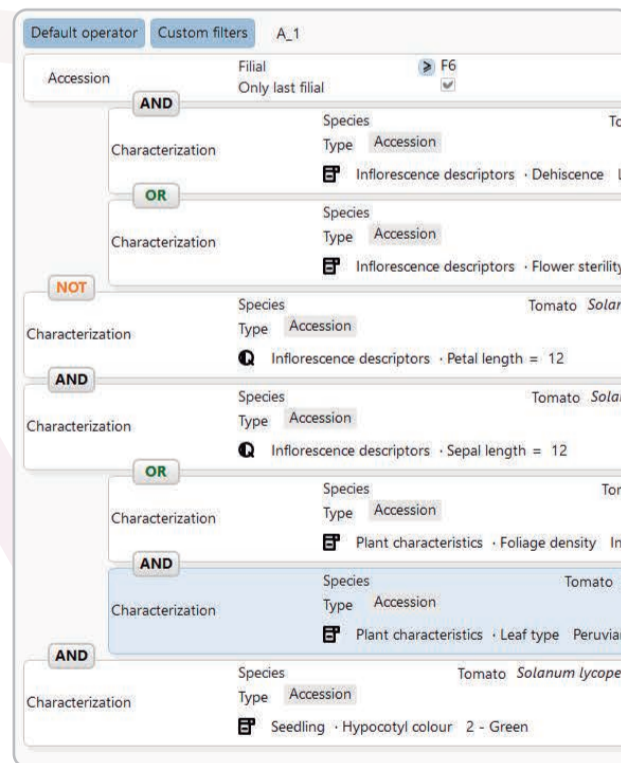

Development of Varieties

The tablet application allows you to take data in the field and automatically record it in the system. The tasks of evaluating materials are simple and robust.

Forecasts and Productions

Noah provides functionalities for analysing forecasts, productions and current stock. All the information is shown related to each other.

Business Intelligence

Noah has advanced tools to provide the support for decision making, enabling absolute control of your business.

Control and security

Noah lets you configure different roles for the users of the system. A role defines the operations that each user can perform in the application. Noah allows to classify the plant materials in areas. Each user can only see the materials that belong to their areas.
